FluctuS Cloud is the Cloud | SaaS platform for monitoring, managing and provisioning.

FluctuS Cloud collects information from each FluctuS module and organizes all the related activities through a programmable workflow.

FluctuS Cloud provides a remote access via web interface after authentication with username and password given at the time of purchase. Thanks to a precise differentiation of roles and to the definition of different levels of access, it allows the complete information security.

FluctuS Cloud offers maximum reliability as hosted in the cloud infrastructure owned by third parties.

FluctuS Cloud needs neither local hardware/software installation, nor specific technological know-how, with the result of speeding up, with a considerable reduction of time and costs, the start-up phase of a project.

FluctuS Cloud Service is included for 1 year in FluctuS Kit and FluctuS Professional Kit, and is extendible to 3 or 5 years.

Remote Control

Geolocalization

Real Time Monitoring

Statistics

Programmable Workflow

Features

General
Secure, reliable and scalable
Fast set-up time
Device management and troubleshooting tools
Real-time data management
